Chapter 1

Introduction

1.1 Ethics

1.2 Information security

1.2.1 Trust (say more - what is this?)

1.3 Privacy

1.4 Identification and authentication

1.4.1 Context and Identity

1.4.2 Levels of Assurance

1.5 The Business Case for IAM

1.5.1 Workforce IAM

1.5.2 Consumer/Citizen IAM

Chapter 2

Digital Identity

2.1 Definition

2.1.1 Reputation

2.1.2 Laws of Identity (this sounds like jurisdictions and real laws - is that the intent?)

2.2 Identifiers

2.3 Digital Identity Lifecycle (?)

2.4 Mapping to human or device

2.5 Proofing, Binding or Registration (?)

2.5.1 Verification/Validation

2.6 Credentials

Chapter 3

Access Control

3.1 Authentication

- 3.1.1 Dynamic Authentication (risk-based)**
- 3.1.2 Multi-Factor Authentication**
- 3.1.3 Single Sign-on Within a Domain**
- 3.1.4 Centralised Authentication Service**
- 3.1.5 Federated Authentication (between domains)**
- 3.1.6 Device Identity for Corroboration**
- 3.1.7 Fast Identity Online (FIDO) and its cousins**
- 3.1.8 Session Management**

3.2 Authorization

- 3.2.1 Resources to Protect**
- 3.2.2 Authorisation**
 - 3.2.2.1 ACL's**
 - 3.2.2.2 RBAC**
 - 3.2.2.3 ABAC / Dynamic Access Management**

Policy Management solutions

3.2.3 Privileged Access Management

3.2.3.1 Alignment to Risk Management

3.2.3.2 System Accounts

Chapter 4

Laws, Regulations, and Standards

Abstract: This chapter provides information about the externally defined environment in which Identity and Access management professionals operate. The laws are documents that define duties and consequences in legal jurisdictions, such as countries. Regulations are more specific and detailed requirements. Standards may also be mandatory; government entities often require compliance with standards produced by certain standards bodies. We also include *de facto* standards and recommended practices here.

4.1 Framework to Understand Legal Environment

Abstract: Identity systems and its participants are governed by a myriad and complex set of laws, regulations, and contractual requirements, and the obligations they impose are not always clear. This article focuses on the legal environment that governs identity systems. The emphasis is on United States, but references are made to other countries' laws and efforts to coordinate rules underway in the UN Commission on International Trade Law (UNCITRAL) regarding identity management legislation.

4.2 Highlights of Selected Laws

Abstract: This section is organized by jurisdiction. It is intended to provide at a minimum a reference to known laws and regulations in jurisdictions likely to be encountered by our membership. At present this includes Europe, United States, and Canada will likely also include Australia in the short term.

4.2.1 Europe

4.2.1.1 GDPR

Abstract: This article provides a basic understanding of how the *General Data Protection Regulation (GDPR)* applies when processing ‘any information relating to an identified or identifiable natural person’.

4.2.2 United States

Abstract: This article explains how identity and access management supports the requirements of prominent U.S. laws.

4.2.2.1 Sarbanes-Oxley Section 404

4.2.2.2 Health Insurance Portability and Accountability Act (HIPAA)

4.2.2.3 Health Information Technology for Economic and Clinical Health Act (HITECH)

4.2.2.4 Family Educational Rights and Privacy Act of 1974 (FERPA)

4.2.2.5 Children’s Online Privacy Protection Act (COPPA)

4.2.2.6 Fair and Accurate Credit Transaction Act (FACTA)

4.2.3 Canada

Abstract: This article explains how identity and access management support the requirements of prominent Canadian laws.

4.2.3.1 Personal Information Protection and Electronic Documents Act (PIPED Act, or PIPEDA)

4.3 Regulations

Abstract: This article explains how identity and access management supports the requirements of prominent regulations.

4.4 Standards

Abstract: There are many standards. Standards may be mandatory such as when government entities require compliance with standards produced by certain standards bodies. We also include *de facto* standards and recommended practices here. This is a curated set of standards that have been deemed to be useful to identity professionals. They are organized topically, not by their source. Standards that span more than one topic are possible. In this case cross references may be used.

4.4.1 Architecture

Abstract: This article surveys the known standards concerning architecture for identity systems.

4.4.1.1 ISO/IEC 24760-2:2015 Information technology -- Security techniques -- A framework for identity management -- Part 2: Reference architecture and requirements

4.4.2 Assurance

Abstract: This article surveys the known standards concerning risk and assurance for identity systems.

4.4.2.1 *Standard on Identity and Credential Assurance*

[Canada] Government of Canada February 2013 <https://www.tbs-sct.gc.ca/pol/doc-eng.aspx?id=26776>. Archived - Need successors

4.4.2.2 *Digital Identity Guidelines*

[SP 800-63-3] NIST Special Publication 800-63-3 June 2017 <https://doi.org/10.6028/NIST.SP.800-63-3>

4.4.2.3 *Guide for Applying the Risk Management Framework to Federal Information Systems: A Security Life Cycle Approach*

[SP-800-37] NIST Special Publication 800-37r1 June 2014 <https://doi.org/10.6028/NIST.SP.800-37r1>

4.4.3 Authentication

Abstract: This article surveys the known standards concerning methods of authenticating principals.

4.4.3.1 *Digital Identity Guidelines: Authentication and Lifecycle Management*

[SP 800-63B] NIST Special Publication 800-63C December 2017 <https://doi.org/10.6028/NIST.SP.800-63b>

4.4.3.2 *Introduction to Public Key Technology and the Federal PKI Infrastructure*

[SP 800-32] NIST Special Publication 800-32 February 2001. https://tsapps.nist.gov/publication/get_p

4.4.3.3 *Lightweight Directory Access Protocol (LDAP): Technical Specification Road Map*

[IETF RFC 4510] RFC 4510 June 2006 <https://tools.ietf.org/html/rfc4510>

4.4.3.4 *OpenID Connect Core 1.0 incorporating errata set 1*

[OIDC] Sakimura, N., Bradley, B., Jones, M., de Medeiros, B., and C. Mortimore November 2014 https://openid.net/specs/openid-connect-core-1_0.html.

4.4.3.5 *Personal Identity Verification (PIV) of Federal Employees and Contractors*

[FIPS 201-2] NIST FIPS Publication 201-2 September 2013 <https://doi.org/10.6028/NIST.FIPS.201-2>

4.4.3.6 *Biometric Data Specification for Personal Identity Verification*

[SP 800-76-2] NIST Special Publication 800-76-2 July 2013 <https://doi.org/10.6028/NIST.SP.800-76-2>

4.4.4 Authorization

Abstract: This article surveys the known standards concerning methods of access control. These standards involve protecting resources. This is sometimes called authorization.

4.4.4.1 *The OAuth 2.0 Authorization Framework*

[IETF RFC 6749] RFC 6749 October 2012 <https://tools.ietf.org/html/rfc6749>

4.4.4.2 *User-Managed Access (UMA) Profile of OAuth 2.0*

Abstract: The weaknesses of many notice-and-consent paradigms of data privacy are clear. This article notes the social, legal and regulatory drivers and examines some approaches to satisfy them.

[KI UMA] Kantara Initiative UMA Recommendation December 2015 <https://docs.kantarainitiative.org/uma-core.html>

4.4.5 Federation

Abstract: This article surveys the known standards concerning methods of allowing authentication from one domain to be honored in another.

4.4.5.1 *OpenID Connect Core 1.0 incorporating errata set 1*

[OIDC] Sakimura, N., Bradley, B., Jones, M., de Medeiros, B., and C. Mortimore November 2014 https://openid.net/specs/openid-connect-core-1_0.html.

4.4.5.2 *Assertions and Protocols for the OASIS Security Assertion Markup Language (SAML) V2.0*

[OASIS SAML 2] SAML 2.0 March 2005 <http://docs.oasis-open.org/security/saml/v2.0/saml-core-2.0-os.pdf>

4.4.5.3 *Digital Identity Guidelines: Federation and Assertions*

[SP 800-63C] NIST Special Publication 800-63C December 2017 <https://doi.org/10.6028/NIST.SP.800-63c>

4.4.6 Lifecycle

Abstract: This article surveys the known standards concerning the creation and registration of identities and subsequent changes to the characteristics of those identities and the eventual removal of the same.

4.4.6.1 *Standard on Identity and Credential Assurance*

[Canada] Government of Canada February 2013 <https://www.tbs-sct.gc.ca/pol/doc-eng.aspx?id=26776>. Archived - Need successors

4.4.6.2 *Digital Identity Guidelines: Enrollment and Identity Proofing Requirements*

[SP 800-63A] NIST Special Publication 800-63A December 2017 <https://doi.org/10.6028/NIST.SP.800-63a>

4.4.6.3 *Digital Identity Guidelines: Authentication and Lifecycle Management*

[SP 800-63B] NIST Special Publication 800-63C December 2017 <https://doi.org/10.6028/NIST.SP.800-63b>

4.4.7 Operations

Abstract: This article surveys the known standards concerning the operation of identity systems.

4.4.7.1 *Information technology -- Security techniques -- A framework for identity management -- Part 3: Practice*

[ISO 24760-3] ISO/IEC 24760-3:2016 2016 <https://webstore.ansi.org/Standards/ISO/ISOIEC247602016>

4.4.8 Terminology

Abstract: This article surveys the known standards for the purpose of collating and contrasting terminology defined.

4.4.8.1 *Digital Identity Guidelines*

[SP 800-63-3] NIST Special Publication 800-63-3 June 2017 <https://doi.org/10.6028/NIST.SP.800-63-3>

4.4.8.2 *An Ontology of Identity Credentials Part I: Background and Formulation*

[SP 800-103] NIST Special Publication 800-103 (Draft) October 2006. <https://tsapps.nist.gov/publication>

4.4.8.3 *Security and Privacy -- A Framework For Identity Management -- Part 1: Terminology And Concepts*

[ISO 24760-1] ISO/IEC 24760-1:2019 IT 2019 <https://webstore.ansi.org/Standards/ISO/ISOIEC247602>

4.4.8.4 ISO/IEC 24760-1:2019 IT Security and Privacy -- A Framework For Identity Management -- Part 1: Terminology And Concepts

Chapter 5

Workforce IAM / Internal IAM

5.1 IAM Processes

5.1.1 Joiner-Mover-Leaver

5.1.2 HR Ownership

5.1.3 Provisioning (On-boarding and Off-boarding)

5.1.4 Role Management

5.1.5 Re-certification

5.2 Compliance

5.3 Analytics and Intelligence

5.4 Handling Business Partners' People

Chapter 6

Consumer/Citizen IAM

6.1 Consumer Journey (identification to loyal customer)

6.1.1 Registration of Consumers

6.1.2 Authentication Assurance (meeting LoA requirements)

6.2 Industry Considerations

6.2.1 Public Sector vs. Private Sector

6.2.2 Financial Services

6.2.3 Healthcare

6.3 Social Sign-up and Sign-on

Chapter 7

Non-Human Entity

7.1 Operational Technology (OT)

7.2 IoT Devices

7.2.1 IoT Sectors

7.2.1.1 Home Automation

7.2.1.2 Personal (wearables)

7.2.1.3 Implants

7.2.1.4 Plant Automation

7.2.1.5 Vehicle

7.2.1.6 Smart Cities

7.2.1.7 Agriculture

7.2.1.8 Building/Industrial

7.2.1.9 Utilities

7.3 RPA / robotics

7.4 Security requirements

Chapter 8

IAM Architecture and Solutions

8.1 Business System

8.1.1 Business Processes

8.1.1.1 Recertification of accounts

8.2 Information/Data Architecture

8.3 Application Portfolio

8.3.1 APIs

8.3.1.1 HTTP

8.3.1.2 S/LDAP

8.3.1.3 RACF

8.3.1.4 XACML

8.4 Technical

8.4.1 Repositories

8.4.1.1 Relational Database

Query optimization

Replication limitations

8.4.1.2 Directories

Historical note - X.500

SLAPD and its descendants

8.4.1.3 NoSQL databases

Graph Databases

8.4.1.4 Identity Provider (IdP) Trends

Distributed Ledger (Blockchain)

8.4.2 Identity Provider Services

8.4.3 Protocols

8.4.3.1 Kerberos

8.4.3.2 Lightweight Directory Access Protocol (LDAP)

8.4.3.3 SCIM

8.4.3.4 SAML

SP Initiated vs IDP Initiated

Bindings

8.4.3.5 OIDC

Authentications Flows

8.4.3.6 OAuth

8.4.3.7 WS-Fed

8.4.3.8 FIDO U2F and UAF

8.4.4 Enterprise control of “Cloud”

8.4.4.1 Public Cloud vs Private Cloud

8.4.4.2 Local Connectors and Gateways

8.4.4.3 IPSec VPN

8.5 Recommended Practices

8.5.1 Design for security

8.6 Governance and Administration

8.6.1 Audit

8.6.2 Monitoring

Chapter 9

Operational Considerations

9.1 Account recovery

9.2 Call centers

9.3 Engagement of user for their own security

9.4 Security events and operations

Chapter 10

Project Management

10.1 Introduction

10.2 Importance of Project Management

Abstract: Many Identity and Access Management (IAM) projects proceed without a project manager. In these cases the IT group in charge of identity management are left to deploy the required solution in the absence of any overarching management. While this is sometimes seen as the most expedient way to get a system installed or updated, it is short-sighted and likely to cost the organisation more money in the longer term. An IAM solution touches so many systems within an organisation and is dependent on the current and planned condition of so many applications that to deploy a solution without properly considering the impact, managing the required resources and keeping management advised of progress, will result in a substandard deployment.

Project management does have a cost, it is typically between 5-10% of a project's total expenditure but it represents the best return in comparison to any other investment an organisation is likely to be afforded.

10.3 Characteristics of a Project Manager

Abstract: Too often, in the IT sector, a project manager is low-level employee who is expected to bring a project in on time and within budget with minimal assistance from upper management and minimal visibility within the organization. In reality a project manager needs sufficient resources to allow him or her to adequately monitor and manage their project, and regular communications with a steering committee

consisting of representatives from upper management. There are two prime characteristics that are essential to a project manager:

Predictability	Management doesn't like surprises. A project manager should determine and report o
Flexibility	Gone are the days when a project manager slavishly followed an approved Gantt chart

Project managers require competence in the five components of project management:

- Planning
- Organising
- Resourcing
- Directing
- Controlling

10.4 PMI Framework

Abstract: By definition a project must have a start and a finish. Business-as-usual is never project work and does not require the skills of a project manager. Before the start of a project there will be some preparatory work to define the concept. Between the commencement and completion there are discrete stages that define the project work. After the project completion the deliverable will enter an operational status.

10.4.1 Concept

Abstract: Projects come out of a need. In the IAM world it might be a need to reduce costs and improve security by better using identity information for on-boarding and off-boarding staff, it might be improving governance over identity information or it might be upgrading existing IAM infrastructure. Typically it will fall to a project sponsor to communicate the requirement and commence evaluating the cost and duration of the required activity. The sponsor will typically fund this stage and then engage a project manager to complete the planning stage.

10.4.2 Planning Stage

Abstract: Once approval to proceed has been received the project manager will engage with the stakeholders to define the project scope. It is usual for the size and complexity of the project to increase at this point. For an IAM project that might have initially been to deploy an identity manager for the assignment of email accounts and AD account will expand to include provisioning into corporate applications and

possibly include additional functionality such as periodic attestation reporting and re-certification. It is important that the appropriate project stakeholders have been engaged by this point, to ensure appropriate definition of the project scope.

10.4.3 Deployment Stage

Abstract: The project deployment will vary depending upon the project management mechanism to be used.

10.4.4 Methodologies

10.5 PMO Issues

Abstract: In organizations with a Project Management Office an IAM project must follow the corporate procedures. Typically a PMO will have defined “gates” through which all projects must pass. For instance there will typically be a project approval gate in which the appropriate managers will review the project plan and indicate their approval. There will usually be a budget review to approve the assignment of resources. There might be an architecture review to approve the solution architecture. A review of the governance outcomes should also occur. The PMO should orchestrate this activity.

One of the benefits of a PMO is the visibility it gives to projects within an organization. This is beneficial to the IAM team in that it gives them insight into which projects are proceeding and provides the opportunity to ensure any projects with an identity component are properly identified and accommodated in the appropriate program of work. For instance, if an authentication gateway is being installed, any application undergoing development should be modified to use the gateway rather than maintaining LDAP lookups. Without a PMO it is sometimes difficult for the IAM team to impact projects. A PMO provides the opportunity to educate project managers on identity issues and to insert IAM requirements into IT projects within an organisation.

Chapter 11

IAM Knowledge Sharing

11.1 IDPro

11.2 Gartner

11.3 KuppingerCole

11.4 IIW

11.5 Bibliography

Chapter 12

Advanced Topics – Parking Lot

**12.1 Digital Legacy - handling deceased persons' digital ID
(Advanced Topic)**

12.2 Self-Sovereign Identity

12.2.1 Blockchain ID
